Authentication

Setup

- Configuration can be tricky but makes development much easier
- 3 main things to remember:
 - Dependency management in gradle
 - Connection by Google Services google-services.json
 - Setting up the project on firebase console

```
You can use the Project Structure dialog to view and edit your project configuration
                                                                                    Open (鉛;) Hide notification
       buildscript {
           repositories {
               google()
               mavenCentral()
           dependencies {
               classpath 'com.google.gms:google-services:4.3.15'
       plugins {
           id 'com.android.application' version '7.3.0' apply false
           id 'com.android.library' version '7.3.0' apply false
13
14
15
       allprojects {
16
           repositories {
18
               google()
               mavenCentral()
20
```

\times Add Firebase to your Android app

Be aware

Why my project will not work on your computer

google-services.json
